The notion that only a limited number of individuals are inherently suited to be researchers has historically deterred many from engaging with the realm of inquiry. Nevertheless, research should not be viewed as an exclusive privilege; rather, it is a skill that is developed through curiosity, commitment, and ongoing education. Writing is at the heart of research, not merely as a means of documentation but as a discovery process. It enables the organization of disparate ideas into coherent knowledge. Many early-career researchers continue to face challenges in articulating the rationale and methodology of their work. This workshop aims to foster a dynamic research community where doctoral candidates can share their experiences, enhance their academic expression, and implement self-regulated learning techniques that contribute to their professional self-perception. Furthermore, it promotes the understanding of research as a fluid mindset that encourages critical thinking, autonomy, and a broader perspective that transcends disciplinary and contextual boundaries.

Please, note that submission of abstracts should be sent to imanedib12@gmail.com and flpatplab@gmail.com before **April 26th, 2025**.
